

Private Rental Affordability Bulletin

Regional Victoria (September Quarter 2014)

METHODOLOGY

Affordable housing can be measured in several ways.

The *TUV Private Rental Affordability Bulletin* draws on two standards:

- **30% of Total Income (30%TI):** For low-income households (defined as being in the lowest 40% of income distribution), spending 30% or more of household income on rent is considered an indicator of housing stress.ⁱ
- **After Housing Poverty Line (AHPL):** Poverty lines are income levels derived for various household types against which poverty can be measured. Simply, if a household's income is less than the poverty line applicable to it, then that household is considered to be in poverty.ⁱⁱ The AHPL refers to a poverty line with housing costs removed. The figures below show how far above or below the poverty line a household is after paying rent at the median level in dollar terms.

The TUV Private Rental Affordability Bulletin draws on a range of sources for median rent levels and national income dataⁱⁱⁱ. The Weekly Minimum Wage (WMW) is reviewed annually by Fair Work Australia and represents the minimum wage applicable to employees who aren't covered by an award or agreement, for example in industries such as retail and hospitality. Average Weekly Earnings (AWE) is reported quarterly by the Australian Bureau of Statistics and is based on all occupations and industries.

From September 2013, additional calculations have been applied to income data to provide a more accurate estimate of net income, which limits comparability with previous bulletins.

ANALYSIS

Couple (2 children) - Min Wage	3 BR House	\$916.00	\$275.00	\$275.00	30.0%	-\$98.64

Rental prices in Shepparton remain among the most affordable in this analysis; however, median rents for all dwelling types have increased since the June quarter. Rents for one and two bedroom flats increased around 5 per cent (\$9 and \$10, respectively) in September. Seven out of eight household types would spend more than 30 per cent of their income on median rent in Shepparton, with students again worst affected by rental prices.

Swan Hill		Income		Median Rent		
Household Type	Property Type	Weekly Income	Affordable Rent (30%)	Rent	% of Income	Difference from AHPL
Single – Austudy	1 BR Flat	\$266.00	\$80.00	\$135.00	50.7%	-\$114.53
Single - Newstart	1 BR Flat	\$315.00	\$94.00	\$135.00	42.9%	-\$66.48

Couple (2 children) - AWE	3 BR House	\$1,253.00	\$376.00	\$255.00	20.3%	\$259.06
Couple (2 children) - Min Wage	3 BR House	\$916.00	\$275.00	\$255.00	27.9%	-\$78.64

The rental market in Swan Hill is the most affordable of the regional cities in this analysis; yet five out of eight low-income household types would still experience housing stress if paying median rents. Students receiving Austudy again face the greatest hardship in the rental market, as median rent for a one bedroom flat would consume more than 50 per cent of their weekly income (up 1.2 per cent from June 2014). Couples with dependent children relying on Newstart sit the furthest below the AHPL at \$159.71 (down up from \$161.49 in the previous quarter).

Traralgon		Income		Median Rent		
Household Type	Property Type	Weekly Income	Affordable Rent (30%)	Rent	% of Income	Difference from AHPL

Couple (2 children) - Min Wage	3 BR House	\$916.00	\$275.00	\$290.00	31.7%	-\$113.64

The rental market in Wodonga is also among the least affordable of the regional cities profiled. The September 2014 quarter saw median rental prices remain mostly unchanged from the previous quarter. All households receiving income support would experience housing stress in Wodonga if paying median rent with singles and couples with children being among the worst affected. Single students must continue to spend 64.7 per cent of their income on median rent for a one bedroom flat and aged pensioners living alone would spend 36.6 per cent of their income on median rent for similar accommodation (unchanged from June 2014).

NOTES

- i A 'housing first' measure of affordability originally derived from commercial lending terms. The assumption is that housing costs have first priority out of the household income.
- ii The Henderson Commission of Inquiry into Poverty (1975) established the poverty line, based on a benchmark income of \$62.70 for a family of two adults and two dependent children in the September quarter of 1973. This amount was the disposable income required to support the basic needs of a family of this size. Poverty lines for other household types are derived from this benchmark figures using equivalence scales. Since then, the Melbourne Institute of Applied Economic and Social Research has updated the HPL using an index of per capita household disposable income, calculated using estimates provided by the Australian Bureau of Statistics (ABS). Thus, because the index is based on estimates, the poverty lines themselves are estimates. Also, updating poverty lines according to changes in household disposable income means that the poverty lines are relative levels of poverty - as real incomes rise, so will poverty lines. The value of the poverty lines will therefore be generally stable relative to general standards of living.
- iii Rent data is based quarterly rental bond payments obtained from the Office of Housing. Income data is collected from Centrelink, the Family Assistance Office, Fair Work Australia and the ABS. Full citations are available on request.
